

AI Chat Interface - After Effects

Help File

Prerequisites

- Compatible with Adobe After Effects CC 2021 or newer
- No plugins required
- Fully customizable using Control Panel

Used Fonts: <https://fonts.google.com/specimen/Manrope>

Project Overview

AI Chat Interface is designed to create a **modern interactive chat UI animation** with typing effects, tool interactions, and customizable themes.

This project contains **3 modules**:

- **AI Chat Interface – Basic** (Chat only)
- **AI Chat Interface – Image Generation** (Chat + Image features)
- **AI Chat Interface – Interactive Tools** (Advanced tools and interactions)

All modules follow the same workflow and control system.

How to Use

- Open your required composition (e.g., **AI Chat Interface – Interactive Tools – Scene 03**)
 - Select the **Control Panel layer**
 - Press **F3** to open Effect Controls
-

Color Controls

- **Color Theme** – Adjust this to switch between preset themes or enable custom mode
 - **Text Color 1–4** – Adjust these to change different text elements
 - **Text Background Color 1–2** – Adjust these to change chat bubble backgrounds
 - **Icon Color 1–3** – Adjust these to change icon colors
 - **Input Box Fill Color** – Adjust this to change input box background
 - **Input Box Stroke Color** – Adjust this to change input box border
 - **Background Fill Color** – Adjust this to change overall background color
-

Light / Dark Mode Controls

- Open **Light/Dark Color layer**
 - Light Mode controls – Adjust these to customize light theme colors
 - Dark Mode controls – Adjust these to customize dark theme colors
 - Same controls are available for both modes
-

Main Controls

Typing Controls

- **Input Cursor Visibility** – Adjust this to show or hide typing cursor
 - **Input Typing Start Time** – Adjust this to control when typing starts
 - **Input Typing Speed** – Adjust this to control typing speed
 - **Input Send Button Animation** – Adjust this to enable or disable send animation
 - **Input Cursor Blink Speed** – Adjust this to control cursor blinking speed
-

Import Photo Controls

- **Import Photo Button Animation** – Adjust this to enable or disable animation
 - **Import Photo Loader Time** – Adjust this to control loading duration
-

Expand Button Control

- **Expand Button Animation** – Adjust this to enable or disable expand animation
-

Advanced Controls

Output Controls

- **Output Cursor Blink** – Adjust this to enable or disable blinking
 - **Output Cursor Blink Speed** – Adjust this to control blink speed
 - **Output Cursor Visibility** – Adjust this to show or hide cursor
-

Action Button Controls

- **Add Image Button Visibility** – Adjust this to show or hide add image button
 - **Add Image Button Type** – Adjust this to change button style
 - **Create Image Button Visibility** – Adjust this to show or hide create image button
 - **Search Button Visibility** – Adjust this to show or hide search button
 - **Reason Button Visibility** – Adjust this to show or hide reason button
-

AI Tools Shortcuts

- **AI Tool Shortcut Button Counts** – Adjust this to control number of shortcut buttons
- **Menu Button Type** – Adjust this to switch menu style

Typewriter & Cursor Controls

(Open **Control Panel – Typewriter & Cursor**)

Typewriter Controls

- **Type** – Adjust this to change typing mode
 - **Word/Char Index (Manual)** – Adjust this to control typing manually
 - **Start At, Duration** – Adjust this to control typing start time and duration
-

Cursor Controls

- **Blink-on-Type** – Adjust this to enable blinking during typing
 - **Stop Blinking on Completion** – Adjust this to stop blinking after typing
 - **Cursor Color** – Adjust this to change cursor color
 - **Cursor Size** – Adjust this to change cursor size
 - **Cursor Roundness** – Adjust this to change cursor shape
 - **Cursor Position** – Adjust this to change cursor position
-

Text Controls

- **Text Color** – Adjust this to change text color
 - **Text Scale** – Adjust this to resize text
 - **Text Position** – Adjust this to move text
 - **Text Line Spacing** – Adjust this to control spacing between lines
-

Shadow Controls

- **Shadow Color** – Adjust this to change shadow color
 - **Shadow Opacity** – Adjust this to control shadow visibility
 - **Shadow Direction** – Adjust this to control shadow angle
 - **Shadow Distance** – Adjust this to control shadow distance
 - **Shadow Softness** – Adjust this to control shadow blur
-

Text Editing

- Only one main text layer is used in this scene
 - **Ask Your Question Here – 4 Lines** – Double-click this layer to edit the main input/question text
 - Update your content directly inside this layer
 - Adjust line breaks as needed to fit your design
-

Output Messages

This project includes **2 Output Message compositions**.
Follow the same steps for both outputs.

How to Use

- Open the composition **!Output Text 01** (same for Output 02)
 - Select the **Control Panel layer**
 - Press **F3** to open Effect Controls
-

Controls

Typing Controls

- **Output Typing Duration** – Adjust this to control how long the output text types on screen
-

Import Photo Controls

- **Import Photo Visibility** – Adjust this to show or hide the imported image inside the message
-

Create Image Controls

- **Create Image Visibility** – Adjust this to show or hide generated image block
 - **Create Image Loader Time** – Adjust this to control loading animation duration
-

Advanced Controls

Import Photo PH Controls

- **Import Photo PH Size** – Adjust this to control placeholder size
 - **Import Photo PH Position** – Adjust this to move placeholder position
 - **Import Photo Scale** – Adjust this to resize imported image
-

Action Icons Controls

- **Good / Bad Response Type** – Adjust this to switch between feedback icons
 - **Copy / Copied Type** – Adjust this to switch copy button states
 - **Read Aloud Button Animation** – Adjust this to enable or disable read aloud animation
-

Text Editing

- **Top Question Text** – Double-click to edit the question text

- **Main Text** – Double-click to edit the output/response text
-

Media Replacement

- Open **Create Image Placeholder / Import Image Placeholder**
 - Press **Ctrl + I / Cmd + I**
 - Import your image
 - Adjust scale and position
-

Note

- This project contains **2 output message styles**
 - Follow the same steps for both compositions
 - All controls and workflow remain consistent
-

Placeholders

- Inside the **Placeholders** folder, you can find all placeholder compositions used in the project
 - **Add Image Icon Placeholders** – Open these to replace add image icons
 - **Profile Picture Placeholder** – Open this to replace profile image
 - **Tool Icons (01–05)** – Open these to replace tool icons
-

Usage

- Open any placeholder composition
 - Press **Ctrl + I / Cmd + I**
 - Import your image/icon
 - Adjust scale and position as needed
-

Note

- Replace placeholders only if needed
 - All placeholders follow the same workflow
-

Recent Searches

This section is used to display multiple recent search items in the sidebar.

How to Use

- Open the composition **!Recent Searches Container**
 - Select the **Control Panel layer**
 - Press **F3** to open Effect Controls
-

Controls

- **Hover BG Position** – Adjust this to control the position of the hover background highlight
 - **List Padding** – Adjust this to control spacing between each recent search item
-

Editing Content

- Open any **Recent Search** composition (e.g., Recent Search 01)
 - Double-click the text layer
 - Edit the search text as needed
-

Managing Items

- Duplicate any **Recent Search** composition to add more items
 - Replace existing items if needed
 - Rearrange layers inside the container to change order
-

Note

- These controls affect all recent search items inside the container
 - All items follow the same structure and workflow
 - Maintain spacing and alignment while editing
-

Final Note

- This project contains 3 modules — Basic, Image Generation, and Interactive Tools
 - Follow the same steps for all modules
 - Only slight control differences may be present depending on the design
-

Rendering / Export

Transparent Background (Alpha)

Open final style composition
Press Ctrl + M / Cmd + M
Output Module → QuickTime
Codec: Apple ProRes 4444
Channels: RGB + Alpha
Click Render

MP4 Export

Add composition to Render Queue
Format: H.264
Adjust quality as needed
Render MP4

Thank You

Thank you for choosing **AI Chat Interface**

Create modern interactive UI animations easily 🎬 ✨
